**PAEL** ruining 10EMA from last 5 trading sessions but sustain to close above 10EMA at the end of the trading sessions. For now 66 is key supporting area; and if stock hold 66 level then stock may lead towards 69 – 70. Closing below 65 with hefty volume may ruin this trend and stock may shatter towards 63.50. Strategy is to "Buy on Dips" considering 65 as a trading stop loss.
